

# BLACK FRIDAY AND CYBER MONDAY

## *Cyber Security Checklist*

### Before The Shopping Frenzy

- **Update all systems:** Ensure all devices have the latest software, antivirus, and firewall updates.
- **Prepare incident response plan:** Update and circulate your cyber incident response plan.
- **Implement strong, unique passwords:** Use strong passwords and a password manager for all accounts.
- **Enable multi-factor authentication:** Enforce MFA where available to enhance security.
- **Educate staff on cybersecurity best practices:** Conduct awareness training on the risks of online shopping scams.
- **Backup all critical business data:** Ensure comprehensive backups are done before the shopping period.
- **Review access controls:** Reassess user permissions to ensure minimum necessary access.

### During Black Friday and Cyber Monday

- **Monitor transactions and system activity:** Keep an eye on all financial transactions and system logs.
- **Set up alerts for unusual patterns:** Configure alerts for suspicious activities like large transactions.
- **Implement real-time monitoring:** Enhance monitoring to detect and respond to threats immediately.

### Advise your employees to:

- **Use secure, reputable payment gateways:** Only process payments through secure and vetted gateways.
- **Verify unexpected offers:** Verify any offers that seem too good to be true.
- **Think before you click:** If a link looks suspicious, it probably is—don't click it.
- **Check website legitimacy:** Use FraudSmarts' scamchecker.ie to verify the legitimacy of unfamiliar sites.
